

FACT VS INFERENCE

Instructions

Read each paragraph and identify:

Fact: directly stated or observable from the text.

Inference: a conclusion you can draw from the facts.

Paragraph 1

A technology company increased its investment in AI infrastructure by 40% this year. It purchased thousands of GPUs and announced plans to build new data centers. The company is preparing to handle greater demand for AI services. The company also reported an increase in demand for AI model training. This suggests that AI will become even more important to the company's business.

Paragraph 2

Several organizations reported an increase in phishing emails containing AI-generated text. Security researchers found that many of these emails were customized using information from social media. AI is making phishing attacks more sophisticated. Traditional email filters failed to detect some of the messages. Organizations may need stronger cybersecurity measures to deal with these threats.

Paragraph 3

A semiconductor company announced plans to construct a new fabrication plant using an advanced manufacturing process. The company has signed agreements with several chip-design firms. The company expects continued demand for advanced semiconductor chips. Demand for high-performance chips has increased in recent years. The new plant may help the company increase its production capacity.

Paragraph 4

A cloud service provider experienced an outage that lasted more than two hours. Several applications using only that provider became unavailable. Depending on a single cloud provider can create a risk for organizations. Some companies using multiple cloud providers continued to provide their services. Using multiple cloud providers can improve service availability.

Paragraph 5

A battery manufacturer developed a new battery cell that stores more energy and uses less expensive materials. The company reported that the new cell can also reduce charging time. Several electric-vehicle manufacturers are testing the technology. The new battery could make electric vehicles more attractive to consumers. The technology may also help reduce the cost of electric vehicles.
